5•6**3-D Shapes****Family Note**

In this lesson, children have identified and compared 3-dimensional shapes. Our class also has created a Shapes Museum using the objects that children brought to school. Read your child's list of shapes. Together, find shapes to complete the list.

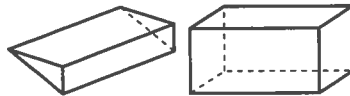

Please return this Home Link to school tomorrow.

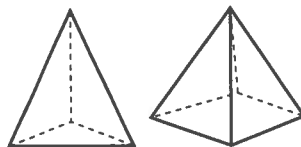

On your way home, look for things that have these five shapes.

Make a list of things you see. Show your list to someone at home.

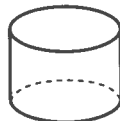

Can you find any more shapes in your home? Add them to your list.
