

How Many?

**Family Note**

In today's lesson, your child learned that multiplication is an operation used to find the total number of things in several equal groups. As you help your child solve the following problems, emphasize that each group has the same number of things. Your child can use objects, draw pictures, count, or use any other helpful devices to find the answers.

Please return this Home Link to school tomorrow.

Example:

How many apples in 4 packages?

$$\begin{array}{ccccccc} \text{||||} & \text{||||} & \text{||||} & \text{||||} \\ 5 & + & 5 & + & 5 & + & 5 = 20 \end{array}$$

There are 20 apples in 4 packages.

- 1.
